

AMENDMENT 2

Reason for Change:

An Exit Questionnaire has been added to the protocol to assess participants' opinions of their participation in the study.

Update:

The following protocol locations are affected:

- *Section 6.1 Schedule of Study Procedures*– “Administer Exit Questionnaire” will be added the Test Session 5 procedures.
- *Section 6.8 Timing of Questionnaire Assessments* – One sentence will be added to the end of this section: “An Exit Questionnaire will be administered at Test Session 5 to assess participants’ opinions of their participation in the study.”

Note: The informed consent form states, “You will provide blood samples, an expired breath sample and will complete questionnaires at each test session.” Because the ICF does not specifically state the nature of each questionnaire, it will not be updated.
